

ACCESSORIES

Innovative, useful accessories are just another example of how RGPC goes the extra mile for custom installers.

RGPC offers the finest power conditioning and management products available on the CEDIA market, of course. But it also delivers these creative solutions that solve real-life challenges often encountered by installers when implementing power management systems.

ADD OUTLETS TO ALREADY-INSTALLED RGPC UNITS.

The RGPC Extender provides additional outlets for maxed-out RGPC Patented Parallel Delivery units that are already installed. It follows the Richard Gray mantra of delivering high current on demand with minimal loss. Utilizing heavy 12 gauge wiring, each of the RGPC Extender's six commercial-grade Hubbell Outlets are wired independently to the power source so all outlets receive the same amount of current. For additional protection and control, step up to the RGPC Extender Pro which comes standard with two triggered outlet banks as well as built in coax protection.

RGPC EXTENDER

AVOID "OVER-DAMPING" OF SIGNALS CAUSED BY SOTERIC POWER CORDS

Many esoteric power cords "over-damp" signals, which results in high-frequency roll-offs and a dulling of the sound in audio as well as visual aberrations on video displays. RGPC HighTensionWire was designed to deliver power to equipment as neutrally as possible. It produces increased dimensionality and color saturation in HD displays, as well as greater dynamics with a lower noise floor from amplifiers and subwoofers. RGPC HighTensionWire simply creates a more natural and realistic entertainment experience.

RGPC HighTensionWire

DELIVER SURGE PROTECTION AND NOISE FILTRATION TO REMOTE DEVICES HANGING ON WALLS OR FROM CEILINGS.

Designed to work in conjunction with RGPC's Patented Parallel Power Delivery units, the RGPC Powerlink enables easy runs of power circuits to remotely-located equipment in a home theater, such as wall-hanging plasmas, ceiling-mounted projectors and even subwoofers. With the RGPC Powerlink in place, you can easily extend surge protection, noise filtration and Richard Gray-patented High-Current-On-Demand to those hard-to-reach components. It provides everything you need to inexpensively extend the benefits of RGPC power delivery systems for your clients.

RGPC POWERLINK

PROTECT GEAR FROM SURGES OVER COAX—WITHOUT SACRIFICING PICTURE QUALITY.

The finest coax protector available on the market today, the RGPC TV Guard responds at lightning speed (less than 100 nanoseconds) to protect sensitive gear from surges over coax lines. What's more, it does so with an extremely low insertion loss, so more of the signal actually makes it to the TV—and more signal strength means a better picture. The RGPC TV Guard is compatible with HD and digital cable as well as satellite and cable modems.

RGPC TV GUARD

ELIMINATE SCROLL BARS AND HUM CAUSED BY GROUND LOOPS IN COAX CONNECTIONS—WITHOUT REMOVING THE GROUND.

The RGPC Eliminator safely removes ground loops from coax lines. Such loops are caused by poor or incomplete grounding, which places a small AC voltage on the line that results in scroll bars in video and a constant hum in audio. Other products address this problem by removing the ground, which potentially can be dangerous to sensitive A/V gear. The RGPC Eliminator, however, maintains a connection to ground but eliminates the loops—which makes it safe and smart. The RGPC Eliminator is HD/digital cable-compatible.
