

RGPC Powerlink

In Wall Power Extension Kit

2 x extended J-Boxes
1 x recessed female outlet
1 x recessed male outlet
1 6' 12AWG connector cord

Power Delivery Extended!

Designed to work in conjunction with our Patented Parallel Power Delivery units, the RGPC Powerlink allows you to easily run power circuits to remote locations such as plasmas, projectors or even a subwoofer. With the Powerlink in place, you can easily extend the surge protection, noise filtration, and Richard Gray patented High-Current-On-Demand to the hardest to reach components.

Hook up is a snap! Simply install the recessed male outlet within six feet of your RGPC Power Delivery model. The recessed female outlet is placed at your remote component. Use your own romex to complete the circuit between the two outlets. Once you plug in the supplied 12 AWG connector cord to the Powerlink and the RGPC Power Delivery Model, you are done!

The RGPC Powerlink provides an easy and convenient solution to provide everything you need to extend the benefits of our power delivery systems without the needless expense.

Please consult with a licensed electrician about your local electrical codes regarding installation
